Spreadsheet Project: IT Ticket Analysis

Problem Statement

The objective is to analyze the IT support ticket management system to understand the performance of IT agents, the efficiency of ticket resolution, and the satisfaction levels of employees. The analysis aims to identify high and low performers among IT agents, assess the overall effectiveness of the team, and pinpoint areas for improvement in the ticket resolution process. The ultimate goal is to make informed staffing decisions, including hiring, firing, and training, to enhance overall service quality and team performance.

Overview of the data

- **Tickets Sheet:** Contains information about IT support tickets.
 - **ID:** Unique identifier for the ticket.
 - **Ticket Fecha:** Date of the ticket.
 - **Employee ID:** ID of the employee who raised the ticket.
 - **Agent ID:** ID of the agent assigned to the ticket.
 - **Request Category:** Category of the request (e.g., Login Access, System, Software).
 - **Issue Type:** Type of issue (e.g., IT Error, IT Request).
 - **Severity:** Severity of the issue.
 - **Priority:** Priority level of the issue.
- **Resolution Time (Days):** Time taken to resolve the ticket.
- **Satisfaction Rate:** Satisfaction rate provided by the employee (1-5 scale).
- **IT Agents:** Contains information about IT agents.
 - **Agent ID:** Unique identifier for the agent.
 - **Full Name:** Full name of the agent.
 - **Email:** Email address of the agent.
 - **Year of Birth:** Year the agent was born.
 - **Month of Birth:** Month the agent was born.
 - **Day of Birth:** Day the agent was born.

Ticket Distribution By Request Category

Key Insight:

A significant portion of support tickets stems from System issues (40%) and Login Access problems (30%), identifying these as key areas requiring attention.

Recommendation:

Focus on implementing automation, targeted training, or infrastructure enhancements in these areas to reduce ticket volume and improve overall operational efficiency.

Ticket count by Severity

Key Insight:

The overwhelming majority of tickets (over 88,000) are classified as Normal severity, indicating routine support demand.

Ticket Based on Satisfaction Rate

Key Insight:

A majority of tickets received high satisfaction ratings (over 78,000 rated 4 or 5), reflecting strong service performance.

Satisfaction Rate By Priority

Key insight :

The low(1) priority level has more number of Satisfaction rate(4.13) then other Priority level

Ticket Based on Priority

Key Insight:

A significant volume of tickets (35,549) are marked as high priority, while a large number (29,410) remain unassigned, indicating a critical gap in resource allocation and urgent response handling.

REQUEST CATEGORY BY RESOLUTION TIME

Key Insights:

- **Hardware (7.63):** Strong understanding and handling of physical components — a clear strength.
- **Login Access (0.31):** Very weak; likely lacks knowledge of authentication, credential management, or security protocols.
- **Software (5.24):** Moderate proficiency; some familiarity with tools, but there's room for improvement.
- **System (6.62):** Good grasp of operating systems and system-level operations.

SATISFACTION RATE BY AGE GROUP

Key Insights:

- The age group **45-49** has the highest average satisfaction rate (4.30).
- The age group **35-39** has the lowest average satisfaction rate (3.93).

Recommendation

- Optimize Agent Workload**

Consider hiring or redistributing tasks—50 agents for nearly 97,498 tickets suggests potential overload.

- Reduce Resolution Time**

Target process automation or AI-based ticket routing to bring down the average resolution from 4.5 days.

- Align Severity with Priority**

Implement stricter ticket triage rules to reduce mismatches between severity (91% Normal) and priority (37% High).

- Address Hardware Issues Proactively**

Since 39% of tickets are hardware-related, investigate root causes and explore preventive maintenance.

- Enhance Training Programs**

Train agents, especially newer ones, to improve efficiency and maintain consistent satisfaction scores.

- Improve Satisfaction Further**

Aim to push the satisfaction score above 4.5 by enhancing communication and first-contact resolution.

- Leverage Top Performers**

Use insights from top agents (e.g., Agent #49) to mentor or train others for performance improvement.

- Monitor Ticket Backlogs**

Add a backlog trend metric to identify bottlenecks and adjust resource allocation dynamically

Conclusion

- Key performance indicators reveal a steady rise in ticket volume, with system-related issues consuming the most resources.
- To uphold high service standards, it's essential to strategically allocate resources, optimize processes, and scale operations efficiently.
- Customer satisfaction is improving overall, but varying preferences across age groups suggest a need for more tailored support strategies.
- Most tickets fall into the medium range for both severity and priority, emphasizing the need for efficient and streamlined resolution workflows.
- While many issues are resolved within the same day, enhancing turnaround times for more complex cases could further improve operational performance.
